

## ENERGY POLICY

**Elif Plastik Ambalaj San. ve Tic. A.Ş. (a Huhtamaki Company) aims to produce the highest quality products that meet customer expectations, utilizing processes that are environmentally conscious, focused on energy efficiency, and operate in healthy and safe working environments. The company acts with the purpose of continually improving the energy management system and energy performance.**

- It undertakes to comply with current energy legislation, customer requirements, and investor expectations,
- To set energy performance indicators and regularly review energy performance,
- To use energy efficiently,
- To provide all necessary information and resources to its employees to achieve energy performance targets,
- To consider energy performance as a criterion in product and process design and to evaluate technological innovations in new investments and modifications in line with this approach,
- To consider energy as a criterion in purchases that may significantly affect energy consumption,
- To ensure the recycling of all energy sources released, to maximize their utilization,
- To minimize energy losses through systematic measurement and monitoring.

**To ensure the success of the energy management system, activities are carried out to develop competency among personnel who may significantly impact energy usage and to create energy awareness among all employees.**
